TRANSPORT SOLUTIONS

Highly reliable On-board CCTV solution

Our robust and reliable transport solutions are built to withstand the demanding operational and environmental conditions encountered on board trains and moving vehicles

Key Scenario

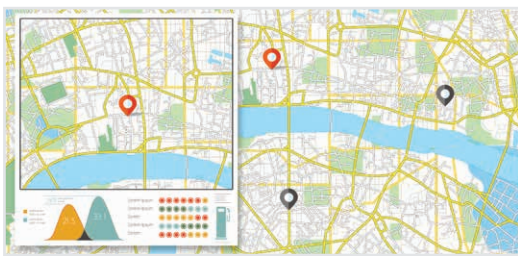

CCTV Products | Rugged Design

A large number of video surveillance products comply with the UK Network Rail's demanding standards in respect of safety. In addition to being built to IP66 and IK10 grades, our high performance cameras comply to EN 50155 and EN 50121-3-2 standards.

Automatic Back-Up and Data Dumping

Working in harmony with robust Wisenet high definition cameras and recording devices, SSM offers the opportunity to seamlessly 'data dump' video recorded on moving trains and buses as they arrive at Wi-Fi points. Video evidence of any incident can be rapidly retrieved via Video Summary, SSM's advanced search facility, which can be refined by defining direction of movement and object colour.

SSM Transportation | Real-time Tracking

When a vehicle is on the move, operations managers can track its location in real-time using a digital map on the SSM Console via 3G or LTE.

SSM Transportation | Remote Monitoring

Network Video Recorders from Hanwha Techwin support panic alarms, alarm inputs, GPS and even G-sensors. Data from these devices can be used to generate alerts in real-time to enable control room operators to react quickly and effectively to any incident or emergency.
